AI USE DECLARATION

CampusPay X — Self-Healing Software Project

Institution	Dezyne École College
Project	CampusPay X
Team members	Honey Sadnani; Krishna Dhalwal
Project scope	Simulation-only campus fee/canteen payment-flow prototype
AI use stated by team	AI used for coding and debugging

Declaration

We declare that AI tools were used as coding and debugging assistance during the development of CampusPay X. The team remains responsible for understanding, reviewing, testing, and presenting the submitted application and documentation. AI assistance does not replace our responsibility for the correctness, safety, originality, and academic integrity of the work.

AI tool	What we asked it to do	What we wrote, changed or checked ourselves
ChatGPT (OpenAI)	Assistance with understanding implementation issues and debugging errors.	We ran the application locally, injected failures, inspected UI/backend output and checked transaction states and event timelines. We will report a test as passed only when we observed its evidence.
ChatGPT (OpenAI)	Suggestions for code structure, test flow, and troubleshooting during development.	We selected the Campus Pay scenario, reviewed the proposed design, integrated the project into our working environment, and are responsible for understanding and explaining the mechanisms retained.

Nature of AI assistance

- Assistance with understanding implementation issues and debugging errors.
- Suggestions for code structure, test flow, and troubleshooting during development.
- The team reviewed and ran the project locally and is responsible for verifying the behavior described in the submission.

Project safety and testing statement

CampusPay X is a simulation-only payment demonstration. It is not intended to process real payments or access live banking services. The team has evidence of a PM2 crash-recovery test in which transaction CPX-67B09943 reached SIMULATED_SUCCESS, the RECOVERY_VERIFIED event was found, and the test reported a total time of 14.37 seconds on 27 October 2026. Other failure scenarios should only be claimed as verified where the team has retained corresponding test evidence.

Declaration

We confirm that the AI tools used in preparing this submission are disclosed above, and that we have reviewed the project and can explain the parts we submit. AI assistance does not replace our responsibility to test the software, verify reported results and disclose known limitations.
